With the chapters: Turtle Anatomy and Physiology, Biology and Husbandry of Turtles, Brumation (Hibernation), Protection of Chelonian Species, General Chelonian Medicine, Clinical Nutrition, Clinical Examination, Examination of Organ Systems, Special Investigative Techniques (Laboratory, Radiology, Ultrasound Endoscopy), Turtle Parasites, Selected Viral Disease of Turtles, Electron Microscopy, Pathomorphological Diagnosis, Administering Medications, Anaesthesia and Surgery, Special Section – Common Turtle Diseases.

Jan Hnízdo is the head of the referral clinic Animal Clinic Prague (Czech Republic) with specialization in small animal surgery, orthopedics and exotic animal medicine. A large number of the exotic animal patients are reptiles.

Nikola Pantchev from Idexx Vet Med Lab Ludwigsburg (Germany) is one of the leading parasitologists in Europe for exotic species; this has been demonstrated in numerous publications. This book is the most up-to-date compendium on chelonian diseases, including their diagnosis and treatment. However, the book also focuses on preventive medicine through inclusion of species-specific husbandry information to help prevent common husbandry mistakes, which may cause disease or injury.

Dr. Frank Mutschman is among
the pioneers of modern herpetolo-
gical veterinary science. His pri-
mary interest is in human-animal
interaction and the responsibility
of owners for the health of their
animals. Recognizing that many
health problems in reptiles can be
avoided through careful husban-
dry is essential. This book about
snake diseases shares his know-
ledge and experience gained from years as a practicing veteri-
narian. It is an indispensable resource for amateur herpetolo-
gists and veterinarians.
